## FOREWORD

The one dominating idea back of "Union Special" is to build the best industrial sewing machines in the world. Our new line of high speed flat bed right and left hand bag machines in Classes 51000 and 51100, equipped with enclosed type oiling system for looper drive eccentric and crank is a pronounced achievement along these lines. All parts are made to gauges with exceedingly close limits.

It is our constant aim to furnish carefully prepared information that will enable the customer to secure all possible economies and advantages from the use of Union Specials. On the pages which follow will be found illustrations and descriptions of the parts for Styles 51000 A and 51100 N.

Additional catalogs, containing information relative to these machines, and which will be furnished on request, are listed below.

Catalog No. 29	Accessories Manual
Catalog No. 45	Needle Manual
Catalog No. 45 A	Price List of Needles
Catalog No. 89	Instructions for installing and operating
Form 357	Engineering Department Adjusting Instructions. Specify the style of machine for which the Adjusting Instructions are required.

In all manufacturing centers will be found Union Special representatives, who will cooperate with those who desire in planning and estimating their requirements.

UNION SPECIAL MACHINE COMPANY

Engineering Department

## IDENTIFICATION OF MACHINES

Each Union Special carries a style number which is stamped in the name plate on the machine. Style numbers are classified as standard and special. Those which are standard have one or more letters suffixed, but never contain the letter "Z". Example: 51100 N. Style numbers containing the letter "Z" are special. When only minor changes are made in a standard machine a "Z" is merely suffixed to the respective standard style number. Example: 51100 NZ.

Styles of machines similar in construction are grouped under a class number which differs from the style numbers in that it contains no letters. Example: 51100.

## APPLICATION OF CATALOG

This catalog applies only to the standard styles of machines as listed herein. It can also be applied with discretion to the special machines covered by these classes.

### STYLES OF MACHINES IN CLASS 51000

Enclosed Type Left Hand Flat Bed One Needle Machine

51000 A For seaming valve multi-wall paper bags, upper and under feed, stitch range 7 to 3 1/2 per inch, enclosed type oiling system for looper drive eccentric and crank, Type 947 G needle.

51000 Z A special style similar to the standard styles in Class 51000, but differing in one or more of its component parts.

### STYLES OF MACHINES IN CLASS 51100

Enclosed Type Right Hand Flat Bed One Needle Machine

51100 N For seaming valve multi-wall paper bags, upper and under feed, stitch range 7 to 3 1/2 per inch, enclosed type oiling system for looper drive eccentric and crank, Type 947 G needle.

51100 Z A special style similar to the standard styles in Class 51100, but differing in one or more of its component parts.

## NEEDLES

### TYPE NUMBERS AND SIZES

Each needle has a type number and size number. The former denotes the kind of shank, point, length, groove, finish, and other details. The latter denotes the largest diameter of the blade, measured in thousandths of an inch midway between the shank and eye, and is stamped in the needle shank. Collectively, the type number and size number is the complete symbol.

To have orders promptly and accurately filled, the empty package, a sample needle, or the type and size numbers should be given. See marks on packages. An intelligent order would read as follows: "1000 Needles Type 947 G Size 073". The type number of the needles most commonly used in the styles of machines covered by this catalog is listed below. Set opposite the type number is the description of the needle.

Type No.	Description
947 G	Round shank, spear point, long, double groove, ball eye, spotted, chromium plated- sizes 067, 073, 080.

### ORDERING REPAIR PARTS

#### PLATES

Illustrations of parts similar in appearance, and, to some extent, component parts of the same subdivision of the mechanism, are grouped according to scale.

When a part is made in two or more sizes, usually only one illustration is shown. In ordering these parts, the additional information requested under these illustrations, such as, "specify length" or "specify size", must be furnished.

#### LIST OF PARTS

The list of parts describes each part and its principal uses. Always check the symbol against its description before ordering. It is not necessary to furnish the plate number.

When a part is used, or can be used, in all machines covered by this catalog, no specific use is mentioned in the description.

For convenience in ordering, minor parts such as screws, nuts, and similar articles are repeated after each major part.

(-) A dash in the "plate number" column of the list of parts denotes the absence of an illustration.

(\*) A double dagger in the "symbol to order by" column denotes that the component parts cannot be furnished separately. Due to the high speed of these machines it is impossible for these associated parts to be fitted a second time and make a serviceable job.

## ORDERING REPAIR PARTS (Continued)

### IDENTIFYING PARTS

Where the construction permits, each part is stamped with its part number. Some of the smaller parts are stamped with an identification letter to distinguish them from parts similar in appearance.

All part numbers represent the same part, regardless of the catalog in which they appear.

### SUPPLIES

All supplies, including taps, reamers, belting, belt hooks, belt fasteners, screw drivers, wrenches and powdered oil stone will be promptly furnished.

### USE GENUINE NEEDLES AND REPAIR PARTS

Success in the operation of these machines can be secured only by the use of genuine Union Special Needles and Repair Parts as furnished by the Union Special Machine Company, its subsidiaries and authorized distributors. Obviously, it is to our interest to maintain the reputation of Union Specials by furnishing the very best goods obtainable. They are designed according to the most approved engineering principles, and are made with the utmost precision.

Genuine needles are put up in packages marked at the top "Trade 'UNION SPECIAL' mark". Genuine repair parts are stamped with a reproduction of the well known two padlocks with a link connecting the shackles.

### TERMS

Prices are strictly "net cash" and subject to change without notice. All shipments are forwarded at the buyer's risk f.o.b. shipping point. Parcel post shipments are insured unless otherwise directed. A charge is made to cover the postage and insurance.

21260 E	Emery Cord, .018 inch diameter, grade No. 200, fifty yard spool- - - - -	--
21355	Chair Leg Extension, 4 inches long- - - - -	8
21388	Wrench. single end, 3/8 inch opening- - - - -	8
21388 F	" offset, for adjusting the stitch length	17
21388 N	" double end, 3/16 and 5/16 inch openings	8
21388 R	" double end, 3/8 and 1/2 inch openings	8
21388 X	" for main shaft bearing housing- - - - -	17
21388 Z	Wrench, for setting needle lever stud correctly with respect to oil groove. Stud is set correctly when the pin hole nearest the periphery is up and a line drawn between the two pin holes is 45 degrees to the right of the vertical- - - - -	8
21394	Utility Grinder, including emery wheel, 5 inches diameter, 1/4 inch face, round belt drive, recommended speed 3000 R.P.M.- - - - -	--
21394 G	Emery Wheel, 5 inches diameter, 1/4 inch face, 3/8 inch hole, grade "M" emery 60	--
21394 H	" " 5 inches diameter, 1/2 inch face, 3/8 inch hole, grade "M" emery 60	--
21394 K	Utility Grinder, including emery wheel, 5 inches diameter, 1/2 inch face, round belt drive, recommended speed 3000 R.P.M.- - - - -	--
21657 E	Cast-off Wire Support Washer- - - - -	4
22509	Set Screw, square head, cup point, 5/16 inch diameter, 18 threads per inch, 1/2 inch long, for thread stand rod connection - - - - -	4
22513	Screw, for presser bar connection guide plate	3
22519 C	Clamp Screw, for feed rocker arm- - - - -	3
22521	Screw, plus size, for cloth plate (tap No.V118)	3
22524	" countersunk head, for oil reservoir top cover- - - - -	3
22528	" for cast-off wire support; also for Nos. K42774, 51005 A, 51026 A, 51243 B, K58615	3
22539 A	Plug Screw, for looper drive lever shaft hole	3
22559 A	Bearing Screw, lower, for looper drive connection - - - - -	3
22559 B	" " upper, for looper drive connection - - - - -	4
22560	Screw, for feed crank link pin spring - - - - -	3
22560 B	" for presser bar guide; also for Nos. 51034, 51134 B - - - - -	3
22561	" for stitch regulator indicator - - - - -	3
22569 B	" for main shaft bushing housing - - - - -	3
22570	" fillister head, for throat plates- - - - -	3

K59048	Feed Rocker Oil Tube, also feed lift and loop- er avoid eccentric oil tube, for Style 51100 N (coupling No. 61294 X) - - - - -	11
K59292	Needle Lever Link Pin Oil Tube, for Style 51100 N (screw, right, No. 22595, screw, left, No. 22849) - - - - -	12
K59837	Cloth Plate, for Style 51100 N (screw No. 80)	17
K60323	Feed Rocker, with .470 inch diameter stem, for Style 51100 N (screw No. 98) - - - - -	10
K60324	Feed Rocker Arm, with .468 inch diameter hole, for Style 51100 N (clamp screw No. 22519 C, clamp screw washer No. 51235 G) - - - - -	9
K60325	Feed Rocker, with .470 inch diameter stem, for Style 51000 A (screw No. 98) - - - - -	10
K60326	Feed Rocker Arm, with .468 inch diameter hole, for Style 51000 A (clamp screw No. 22519 C, clamp screw washer No. 51235 G) - - - - -	9
61294 X	Coupling, for oil line tubes - - - - -	4

THREAD STAND ASSEMBLY FOR  
STYLES 51000 A, 51100 N

# ANALYSIS OF COMPARATIVE SEWING COSTS

This form offers a simple method for you to determine the effect of modern, high speed machines on your production and overhead costs. To use it, merely fill in the starred items. Any Union Special representative will supply the necessary information on the improved machine which will enable you to complete the record.

\*Sewing Operation \_\_\_\_\_

\*PRESENT MACHINE Style \_\_\_\_\_

IMPROVED MACHINE Style \_\_\_\_\_

<p>*1. Average Daily Production per Machine..... Doz. _____</p> <p>(From your own records.)</p>		<p>1. Add _____% (due to increased efficiency of improved machine) to the production shown in the opposite column. Expected production of the new machine is thus..... Doz. _____</p>	
<p>*2. SEWING COST</p> <p>*Average Daily Earnings per Operator..... \$ _____</p> <p>(From your own records.)</p>		<p>2. SEWING COST</p> <p>Average Daily Earnings per Operator..... \$ _____</p> <p>(Increased production from improved machine should enable operator's earnings to be increased up to 10%. Add _____% to average daily earnings shown in opposite column.)</p>	
<p>*Average Daily Overhead per Operator..... \$ _____</p> <p>(Determine your overhead as a percentage of direct labor from your own records. Multiply the average daily earnings per operator shown above by this percentage.)</p>		<p>Average Daily Overhead per Operator..... \$ _____</p> <p>(This is the same as the average daily overhead shown in the opposite column, as dollar overhead is not affected when production per machine is increased.)</p>	
<p>*Total Daily Sewing Cost per Operator..... \$ _____</p> <p>(This is the sum of earnings and overhead as determined above.)</p>		<p>Total Daily Sewing Cost per Operator..... \$ _____</p> <p>(This is the sum of earnings and overhead as determined above.)</p>	
<p>*Sewing Cost per Dozen..... \$ _____</p> <p>(Divide the total daily sewing costs per operator by the average daily production with your present machine.)</p>		<p>Sewing Cost per Dozen..... \$ _____</p> <p>(Divide the total daily sewing cost per operator by the average daily production expected from the new machine.)</p>	
<p>3. SAVINGS EFFECTED</p> <p>Per Dozen Garments..... \$ _____</p> <p>(Subtract the sewing cost per dozen expected with the improved machine from your present sewing cost per dozen.)</p>		<p>4. REPLACEMENT COST</p> <p>Cost of improved machine..... \$ _____</p> <p>Less trade-in or resale value present machine..... \$ _____</p> <p>Less overhauling or repair present machine..... \$ _____</p> <p>Net cost improved machine..... \$ _____</p>	
<p>Per Day..... \$ _____</p> <p>(Multiply the savings per dozen determined above by the production expected from the improved machine.)</p>		<p>5. SUMMARY</p> <p>Number of operating days required to repay net cost..... Days _____</p> <p>(Divide the net cost of improved machine by the annual savings. Multiply this result by 240 days.)</p>	
<p>Per Year..... \$ _____</p> <p>(Multiply the savings per day by 240 days.)</p>		<p>Annual return on net cost..... % _____</p> <p>(Divide the annual savings by the net cost.)</p>	
<p>Less 10% depreciation on net cost of new machine..... \$ _____</p>		<p>(Additional copies of this form, size 8 1/2 x 11", available in quantities at cost.)</p>	
<p>Net Annual Saving..... \$ _____</p>

The logo for the College Sewing Machine Project (CSMP) is centered on the page. It consists of the letters 'CSMP' in a bold, sans-serif font, enclosed within a thin circular border.

### WORLDWIDE SALES AND SERVICE

Union Special Corporation maintains sales and service facilities throughout the world. These offices will aid you in the selection of the right sewing equipment for your particular operation. Union Special Corporation representatives and service technicians are factory trained and are able to serve your needs promptly and efficiently. Whatever your location, there is a qualified representative to serve you.
